DocStyle Partners with World Software Corporation to Bring Word Processing Automation to Worldox

Miami, FL - September 25, 2020 – DocStyle LLC, an innovative solution for automatic Word Styling, PDF Conversion, Cleanup and Numbering for the legal industry has announced that they will integrate directly with Worldox, a leading provider of award-winning document management software.

DocStyle has designed the first ever algorithmic engine for recognizing, grouping and manipulating formatting within electronic files for both Word & PDF. The DocStyle engine identifies paragraphs, groups them together, and builds custom styles automatically. It is also the only solution on the market that can insert individual PDF pages into a document from inside Microsoft Word.

The DocStyle Ribbon compliments the engine by automating Word processing functions like Create Clean Document, a complete numbering suite, Cross Referencing, a TOC generator and offering a series of advanced styling utilities for Microsoft Word power users. With Worldox integration designed throughout the solution, repurposing legacy documents has never been easier.

"Whether coming from PDF or working on documents within Word, Worldox integration is an integral part of our process and success. Accessing, drafting, sharing, securing and collaborating are seamlessly made possible through our unified customer experience." said Chris Cangero, CEO of DocStyle LLC.
